

Proportion of Revision Surgery, Rhegmatogenous Retinal Detachment

Based on the number of patients admitted for the surgical treatment of rhegmatogenous retinal detachment, the proportion of patients who received revision surgery within 60 days of surgery

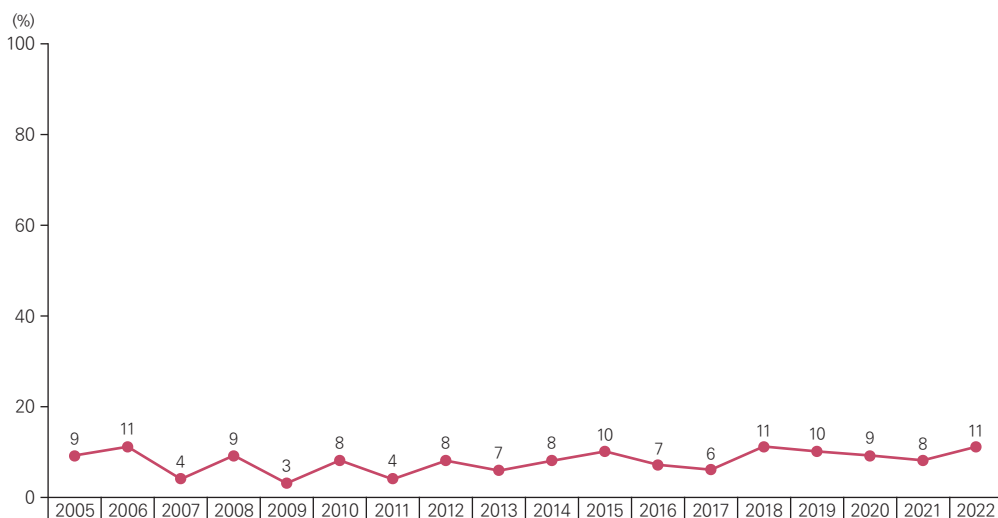

Definitions

- ◆ **Rhegmatogenous retinal detachment surgery:** A surgery performed for the treatment of rhegmatogenous retinal detachment, including vitrectomy and segmental buckling or encircling.
- ◆ **Number of patients admitted for the surgical treatment of rhegmatogenous retinal detachment:** The number of patients whose main diagnosis upon discharge was rhegmatogenous retinal detachment and who received the respective surgery during the admitted period.

Result

January 1, 2005 – December 31, 2022

Interpretation

- ◆ The indicator may represent the primary surgical outcome of rhegmatogenous retinal detachment surgery.

Improvement

- ◆ Monthly conference for the causal analysis of reattachment failure after rhegmatogenous retinal detachment surgery.
- ◆ Thorough follow-up monitoring after discharge.
